

Diesel, Oil, Fuel Oil and Chemical Leak Detection Sensors

Bunded Wall Area Type

Bunded Tank Type

The sensor is designed to optically detect Fuel oil leaks and works by losing light from within a plastic bulb when oil surrounds it. This loss of light is compared to a set value which when exceeded triggers a detected signal. Two types are available one for walled bunded areas, the second for Bunded tanks (tank within a tank) where oil can leak between the inner and outer tanks.
